

IN THE CLAIMS:

No amendment is made herein. The following listing of claims is provided for convenience.

1. (Previously Presented) A call processing system for processing calls associated with a prison facility, comprising:

a first processor-based system coupled to a plurality of telephone terminals disposed within said prison facility, the first processor-based system disposed at the prison facility, said first processor-based system transmitting first voice signals associated with one or more of said plurality of telephone terminals via a digital data link; and

a second processor-based system coupled to said first processor-based system and disposed remotely from said prison facility, said second processor-based system establishing calls to called parties requested by the one or more of the plurality of telephone terminals, the second processor-based system converting the first voice signals for transmission over a carrier network responsive to receiving the first voice signals via the digital data link, the second processor-based system converting second non-VoIP (Voice over Internet Protocol) voice signals from the called parties received via the carrier network to second VoIP voice signals for transmission to the first processor-based system via the digital data link, the second processor-based system monitoring the second non-VoIP voice signals to detect fraudulent or unauthorized call activity in the calls.

2. (Previously Presented) The system of claim 1, wherein the first voice signals and the second VoIP voice signals are transmitted between the first processor-based system and the second processor-based system via voice over Internet protocol data packets.

3. (Previously Presented) The system of claim 1, wherein said first processor-based system switches the calls based on control by said second processor-based system.

4. (Previously Presented) The system of claim 1, wherein the second processor-based system performs call routing for the calls.

5. (Previously Presented) The system of claim 1, wherein the second processor-based system verifies personal identification number (PIN) of a caller placing a call by one of said plurality of telephone terminals.

6. (Previously Presented) The system of claim 1, wherein the second processor-based system processes billing associated with placing a call using said plurality of telephone terminals.

7. (Previously Presented) The system of claim 1, wherein said second processor-based system comprises a call processing platform providing at least one of billing, validation and routing associated with the calls made via said first processor-based system.

8. (Previously Presented) The system of claim 7, wherein said call processing platform provides at least one of billing, validation and routing associated with calls made via a third processor-based system disposed at another prison facility.

9. (Previously Presented) The system of claim 7, wherein said first processor-based system comprises a voice over Internet protocol gateway coupled between the plurality of telephone terminals and the digital data link.

10. (Previously Presented) The system of claim 1, wherein said second processor-based system comprises a network edge device coupled to the digital data link.

11. (Previously Presented) The system of claim 10, wherein said network edge device comprises a gateway between said digital data network and the carrier network.

12. (Previously Presented) The system of claim 11, wherein said carrier network comprises a public switched telephone network.

13. (Original) The system of claim 10, wherein said network edge device comprises a voice over Internet protocol gateway.

14. (Previously Presented) The system of claim 1, wherein the fraudulent or unauthorized call activity comprises a three-way call.

15. (Canceled).

16. (Previously Presented) The system of claim 1, wherein said second processor-based system performs speech recognition on the calls placed by the plurality of telephone terminals.

17-18. (Canceled).

19. (Previously Presented) The system of claim 1, wherein the second processor-based system performs call monitoring and call recording on the calls placed by the plurality of telephone terminals.

20. (Canceled).

21. (Previously Presented) A prison facility call processing system comprising:
a call processing platform coupled, via digital data links, to a plurality of prison facilities located remotely from at least one of the plurality of prison facilities, said call processing platform being coupled to a carrier network for establishing calls from a plurality of telephone terminals in the plurality of prison facilities, the call processing platform receiving first voice signals from the plurality of prison facilities via the digital data links and sending the first voice signals over a carrier network to called parties, the call processing platform receiving second non-VoIP (Voice over Internet Protocol) voice signals from the called parties via the carrier network and converting the second non-VoIP voice signals to second VoIP voice signals for transmission over the digital data links to the plurality of prison facilities, the call processing platform monitoring the second non-VoIP voice signals to detect fraudulent or unauthorized call activity in the calls; and

call processing gateways associated with said plurality of prison facilities to process the second VoIP voice signals for transmission to the plurality of telephone terminals, the call processing gateways generating the first voice signals responsive to receiving call signals from the plurality of telephone terminals.

22. (Previously Presented) The system of claim 21, wherein said digital data links provide voice over Internet protocol data communication between said plurality of prison facilities and said call processing platform.

23. (Canceled).

24. (Previously Presented) The system of claim 21, wherein said fraudulent or unauthorized call activity comprises a three-way call.

25-29. (Canceled).

30. (Original) The system of claim 21, wherein said call processing gateways provide interfacing between at least one analog telephone line interface and said digital data links.

31. (Original) The system of claim 21, wherein said call processing gateways comprise voice over Internet protocol gateways.

32. (Original) The system of claim 21, wherein said call processing gateways provide at least one local area network interface for coupling a computer workstation to said call processing platform via said digital data links.

33. (Canceled).

34. (Previously Presented) A method for providing prison facility call processing in a centralized call processing platform, said method comprising:

- establishing a call from one of a plurality of telephone terminals in a plurality of prison facilities received via a digital data link to a called party outside the plurality of prison facilities, at least one of the plurality of prison facilities located remotely from the centralized call processing platform;

- receiving a first voice signal from the one of the plurality of telephone terminals;

- converting the first voice signal for transmission over a carrier network;

- receiving a second non-VoIP (Voice over Internet Protocol) second voice signal from the called party via the carrier network;

converting the second non-VoIP voice signal to a second VoIP voice signal for transmission over the digital data link to the one of the plurality of telephone terminals; and monitoring the second non-VoIP voice signal for fraudulent or unauthorized call activity.

35. (Canceled).

36. (Previously Presented) The method of claim 34, wherein said fraudulent or unauthorized call activity comprises three-way calling.

37. (Canceled).

38. (Previously Presented) The method of claim 34, further comprising:
validating the call from the one of a plurality of telephone terminals;
routing the call to the called party;
determining acceptance of the call by the called party, the call established responsive to the acceptance of the call by the called party; and
creating call billing information associated with the call.

39. (Previously Presented) The method of claim 34, further comprising performing speech recognition on the call.

40. (Previously Presented) The method of claim 34, further comprising recording the call.

41. (Previously Presented) The system of claim 1, wherein the second processor-based system discontinues the calls responsive to detecting the fraudulent or unauthorized call activity in the calls.

42. (Previously Presented) The system of claim 21, wherein the call processing platform discontinues the calls responsive to detecting the fraudulent or unauthorized call activity in the calls.

43. (Previously Presented) The method of claim 34, further comprising discontinuing the call responsive to detecting the fraudulent or unauthorized call activity.
